NEOPLASIA

By

Dr. Tahira Tabassum

**Assistant Professor,
Department Of Pathology,
SMC, Sargodha**

NEOPLASM

An abnormal mass of tissue, the growth of which exceeds & is uncoordinated with that of normal tissues & persists in the same excessive manner after the cessation of the stimuli which evoked the change

ONCOLOGY

Study of tumors/Neoplasms

TYPES OF NEOPLASMS

- ◎ **BENIGN:** Remain localized, can not spread to other sites, amenable to local surgical removal & pt. survives
- ◎ **MALIGNANT:** Invade & destroy adjacent structures, spread to distant sites, pt. dies
